

AGENTIC AI SIGNAL ENGINE

# How the Velora bot thinks

From raw market data to a risk-checked trade signal. A team of AI agents analyses, debates and verifies every signal before it reaches you.

BETA VERSION | UNDER TESTING

Development > Beta Testing > Delivery

This presentation explains how the system works. It is not a final product launch.

# Where We Are Today

## What 'Beta' means

The features work but are still being refined and tested. Signal format, timing and accuracy may change during testing. Beta signals are for information only and are not financial advice.

# The Pipeline: From Data to Signal

# Meet the Agents

## Data Agent

The collector

### LOOKS AT

- Live prices, candles, volume
- Spread and session timing
- Data health checks

### RETURNS

Clean data for every agent

## Technical Agent

The chart reader

### LOOKS AT

- Trend and momentum
- Support and resistance
- RSI, MACD, moving averages
- Several timeframes

### RETURNS

Bias + confidence

## Sentiment Agent

The mood reader

### LOOKS AT

- Market mood and positioning
- Fear and greed signals
- Mood shifts versus price

### RETURNS

Bias + confidence

## News Agent

The event watcher

### LOOKS AT

- Economic calendar
- Headlines: rates, inflation, geopolitics
- Timing of big events

### RETURNS

Bias + confidence +  
big-news warning

## Quant Agent

The number cruncher

### LOOKS AT

- Volatility (ATR)
- Correlations
- Probabilities and backtest stats
- Suggested SL and TP

### RETURNS

Bias + confidence + SL / TP

Four analysts, one shared data feed. Each works independently so no single indicator decides the trade.

# The Debate Agent

The debate forces a written reason for every trade.

# The Risk Check

## THE 6 CHECKS

### 1 Agent agreement

Enough analysts must point the same way (minimum set by us).

### 2 Confidence

The combined confidence score must pass a minimum level.

### 3 Reward : Risk

Take profit must be at least twice the stop-loss distance (1 : 2).

### 4 News filter

No signal just before high-impact news events.

### 5 Market conditions

Spread and volatility must be inside safe limits.

### 6 Signal control

Daily signal limit, and no duplicate of an open signal.

All thresholds are set by the Velora team and are being tuned during Beta testing.

DELIVERY

# Anatomy of a Signal

BETA | UNDER TESTING

## NEW SIGNAL

EXAMPLE FORMAT

# XAUUSD

BUY

|           |         |
|-----------|---------|
| Entry     | 2650.50 |
| Stop Loss | 2645.00 |
| TP1       | 2656.00 |
| TP2       | 2661.00 |
| TP3       | 2666.00 |

## REASON

Trend up, no big news ahead, reward : risk of 1 : 2 met.

ACTIVE

Example only. Not a live signal.

1

### Telegram channel

Instant alert the moment a signal is approved by the risk check.

2

### Website live feed

New signal cards appear automatically, newest first. No page refresh needed.

3

### Status updates

Messages like TP1 HIT or SL HIT update the existing card instead of adding a new one.

4

### Why this signal (Beta)

Optional expander shows each agent's verdict and the debate summary.

# Testing and Accuracy Loop

## WHAT WE MEASURE

- Win rate
- Average reward : risk
- Maximum drawdown
- Rejected signals, and how they would have ended
- Agent agreement versus real outcome

## OUR PROMISE

No accuracy percentage is claimed during Beta. Results will be shared only after they are measured and verified in testing.

WHAT'S NEXT

# Next Steps and Notice

BETA | UNDER TESTING

## NEXT STEPS

- ☐ Finalise agent rules and thresholds
- ☐ Complete Beta testing and review results
- ☐ Connect the Telegram bot to the website live feed
- ☐ Release the Beta signals feed

## BETA NOTICE AND RISK DISCLOSURE

Velora is a Beta version and is still under testing. Signals are for information only and are not financial advice. Trading involves risk, including the loss of capital. Tested or past results do not guarantee future performance. Never risk money you cannot afford to lose.
